

Preprocess the image

1. Binning

2. Normalize the image

3. Padding

4. Check the image format that
the cc function accepts

Optional: denoise (filter), crop
the image to make test image

Prepare the template

1. Import the pdb

2. Make projections (check
pixel size (if px size matches
the dimensions will match just
need to choose box size in
which particle will fit),
normalization, image format)

Optional: add artificial noise

NCC

Optimize the shift

Optimize the threshold

Optional: if working with side
view optimize the angle step

Extract the particles
